### 3 BUSINESS-REQUIREMENT:

As an application developer, develop the Movie Ticket Booking App (Single Page App) with below guidelines:

User Story #	User Story Name	User Story
US_01	Welcome Page	<p>As a user I should be able to visit the welcome page as default page.</p> <p>Acceptance criteria:</p> <ol style="list-style-type: none"> <li>1. User can click Movies button given in menu bar.</li> <li>2. User can click on logo to come on landing page from anywhere.</li> </ol>
US_02	Select Movie	<p>As a user I should be able to</p> <ol style="list-style-type: none"> <li>1. View all the movies available in selected city.</li> <li>2. All Movie should be visible in card view with below details: <ul style="list-style-type: none"> <li>◆ Title</li> <li>◆ Image</li> <li>◆ Ratings</li> <li>◆ Genre</li> <li>◆ Lenght (minutes)</li> <li>◆ ReleasedDate</li> <li>◆ Language</li> <li>◆ Book button</li> </ul> </li> <li>3. Click on any movie to continue to book ticket for same movie.</li> <li>4. A valild message should be visible if no movie is available in selected city.</li> </ol>
US_03	Select Show	<p>As a user I should be able to</p> <ol style="list-style-type: none"> <li>1. View all the shows available for the selected movie.</li> <li>2. All the shows should contain below details: <ul style="list-style-type: none"> <li>◆ Show Time</li> <li>◆ Continue button</li> </ul> </li> <li>3. Click on continue button to select show and book ticket for same show.</li> <li>4. A valild message should be visible if no show is available in selected movie.</li> </ol>
US_04	Book Show	<p>As a user I should be able to</p> <ol style="list-style-type: none"> <li>1. Insert below details: <ul style="list-style-type: none"> <li>◆ Mobile number (required)</li> <li>◆ Emailid (required)</li> <li>◆ No of seats (required, minimum should be 1)</li> <li>◆ Price per seat (auto selected and not editable)</li> <li>◆ Total price (auto calculated and not editable)</li> </ul> </li> </ol>

US_05	Confirm Booking	<p>2. Click on Book button to confirm booking. As a user I should be able to</p> <p>1. see all the movie ticket details before saved in db via rest api. 2. Confirm ticket to book.</p> <p>1. On successful booking show message - <b>"Your booking is confirmed, Please be on time"</b> 2. On booking failure show message - <b>"Your booking failed, please try again"</b> 3. POST booked ticket to fake rest api.</p> <p>As an admin I should be able to</p> <p>Acceptance criteria:</p> <p>1. See all the ticket details from the database. 2. When new ticket is saved in database, it should be updated on page. 3. Use ngrx/store to manage tickets.</p>
US_06	AdminArea	

## 4 CONSTRAINTS

1. On the book show page load, input focus must come to the first input field.
2. You should be able to press "TAB" key and "SHIFT + TAB" to navigate from top field to bottom field and vice-versa.
3. Cities, movies details must be fetched via fake-rest API from movie-ticket.json.
4. On clicking the "Book" button, user details must be saved via fake-rest API in movie-ticket.json.
5. Fake rest api is implemented with json-server.

Example JSON for reference of fields to be used:

**movie-db.json**

```
{
  "cities": [
    { "id": "1", "name": "Mumbai", "state": "Maharashtra" },
    { "id": "2", "name": "Delhi", "state": "Delhi" },
    { "id": "3", "name": "Bengaluru", "state": "Karnataka" }
  ],
  "movies": [
    {
      "id": 1,
```

```

        "title": "Superman is flying",
        "image":
        "https://i.picsum.photos/id/650/300/200.jpg?hmac=nuRnZrByBYKU6fsTl1xwz3MlpNrNjb
        OPjLJA5ypiOqU",
        "ratings": 3.4,
        "genre": "fantasy",
        "length": 119,
        "releasedDate": "28/12/2012",
        "language": "English",
        "showTime": "21:00",
        "price": 300
    }
],
    "tickets": [
        { "id": 1, "mobile": "9898989898", "email": "demo@gmail.com", "seats": 4,
        "movieId": 1, "paid": 1200 }
    ]
}

```

## 5 MANDATORY ASSESSMENT GUIDELINES

---

1. All actions like build, compile, running application, running test cases will be through Command Terminal.
2. To open the command terminal the test takers, need to go to Application menu (Three horizontal lines at left top) -> Terminal -> New Terminal.
3. This editor Auto Saves the code.
4. If you want to exit(logout) and continue the coding later anytime (using Save & Exit option on Assessment Landing Page) then you need to use CTRL+Shift+B-command compulsorily on code IDE. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.
5. These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.
6. To test any Restful application, the last option on the left panel of IDE, you can find

ThunderClient, which is the lightweight equivalent of POSTMAN.

7. This is a web-based application, to run the application on a browser, use the internal browser in the workspace. Click on the second last option on the left panel of IDE, you can find Browser Preview, where you can launch the application.

**Note: The application will not run in the local browser**

8. You can follow series of command to setup Angular environment once you are in your project-name folder:
  - a. `npm install` -> Will install all dependencies -> takes 10 to 15 min
  - b. `npm run start` -> To compile and deploy the project in browser. You can press <Ctrl> key while clicking on localhost:4200 to open project in browser -> takes 2 to 3 min
  - c. `npm run json-server` -> to deploy fake rest api created with json-server -> takes 10 to 15 seconds
  - d. `npm run jest` -> to run all test cases. **It is mandatory to run this command before submission of workspace** -> takes 5 to 6 min
9. You may also run “`npm run jest`” while developing the solution to re-factor the code to pass the test-cases.
10. Once you are done with development and ready with submission, you may navigate to the previous tab and submit the workspace. It is mandatory to click on **“Submit Assessment”** after you are done with code.
11. You need to use CTRL+Shift+B - command compulsorily on code IDE, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.
